At the age of 16, I began my career in a **statistics company and as a sales and marketing manager in a small retail** company. The interaction between people, numbers and data soon became a passion that would shape my entire future.

At the age of 30, I took on **my first business**, a restaurant, increasing the initial profits up to €300k annually. During this time, I used customer data analytics and big data to steadily improve business profitability.

After 5 years of the first restaurant, I founded **my second restaurant**, under the same business umbrella, going from €300k to **€800k** annually and reaching up to **20 employees under my charge**. In this process, I focused on strategies resulting from data analysis to improve business profitability.

At 35 years old, I founded and was **president and board member of in 2 business associations** in my city for the commercial revitalization of the area, business support and improvements in revenue for around **250 companies**. This experience consolidated me in the **use of government data and data obtained from the constituent companies** themselves, for community and business development.

In 2022 I finished this stage of entrepreneurship and associations to focus on my true passion, **computing and data science**.

Oliver Álvarez
Data Scientist

Experience

2023 - now | **Data Science Projects**

2017 - now | **President of Business Association** | + 6 years | ~ **150 companies**
Candelaria Business Association (AECAN), Tenerife, Spain.

2020 - 22 | **Board member of Business Association** | + 2 years | ~ **40 companies**
